

Training the Caregivers of the Future

The CVI pavilion will be the bricks and mortar to help us recruit and retain the brightest, most talented team members—our greatest strength.

With the pavilion as our home base, we'll expand our **caregiver and patient education programs**, including:

Fellowships, Residencies and Ongoing Training. The CVI pavilion will be a destination for learning and professional development for cardiovascular caregivers. We'll attract ambitious doctors from across the country to train, conduct groundbreaking research and establish their careers—right here in Glenview. Our nurses will have new, innovative educational opportunities keeping them up to date on the latest advancements in cardiology.

Advocacy Initiatives. Our cardiologists and researchers will partner with local heart health champions—policymakers and senior living organizations, to name a few—to educate the community on heart disease prevention and early detection.

Simulation-Based Learning. Within the CVI pavilion, caregivers will have access to state-of-the-art patient simulation technology, so they can practice the most groundbreaking procedures safely and confidently.

We're ushering in a new era of cardiovascular medicine. Will you join us?

The future of cardiovascular medicine at NorthShore depends on the generosity of our philanthropic partners. The CVI pavilion will set the gold standard for treating heart disease in our community and beyond. There's no better team to support, and there's no better time than *right now*.

To learn more about opportunities to support this transformative project, please visit Foundation.NorthShore.org/CVI or contact Walt Cody, Director of Philanthropy, at WCody@NorthShore.org.

"I was drawn to the cardiology fellowship at NorthShore because of the research program, as well as the remarkable physicians who are my teachers and mentors. I truly believe there are no limits to what we can do for patients here."

Luis Paz Rios, MD, Structural Cardiology Fellow
